#### ACKNOWLEDGMENT

This volume was prepared by Works Progress Administration Projects.

Official Project numbers 65-3-4349 and 265-03-7010 ( Work Projects 4454 and 7306 ), District Eight, California.

Sponsored by the United States Department of Interior for the Western Museum Division of National Park Service.

## FOREWORD

This is the Crater Lake section of a General Index to Nature Notes being compiled at the Western Museum Laboratories of National Park Service. The General Index covers the years 1920-1936 inclusive and contains 21,800 annotated catalogue cards. It was made primarily to fill the long-felt need for ready-reference material in the Division of Public Relations at Washington. A duplicate set of the cards is filed at the Laboratories in Berkeley. A limited number of bound volumes of the entire Index are being prepared for distribution.

Approximately 560 cards in the above-mentioned Index refer to Crater Lake National Park. These cards form the basis for the present author-subject index. It will be noted that many more than that number of items appear in this arrangement because of the emphasis on subject, many articles having been indexed under several subject headings.

The compiler has not attempted systematic classification of flora and fauna; but certain topics, such as Animals, Geology, and others, have been loosely grouped together for convenience.

However, in cases where there happened to be only three or four references to a certain topic in the Nature Notes of a particular park, those references have been distributed under their respective headings in the general alphabet.

Certain inconsistencies and lack of comprehensiveness exist because the indexing was done indirectly, rather than from the original Nature Notes. The indexers were dependent for subject headings on the facts brought out in the briefly annotated catalogue cards.
